Consultant:	R.J. Burnside International Limited
Vandex Applicator:	Cretecor
Construction Period:	Sept 2011 – Dec 2013

NAMPULA CITY WATER SUPPLY SYSTEM

Expansion of the Nampula City Water Supply System.

Project

The city of Nampula, the capital of the province of the same name, a trading centre in the north Mozambique had to extend the capacity of their city water supply scheme by providing an additional containment capacity of about 5'000 m³ to their existing storage and treatment plant.

Solution

All new concrete tanks were lined inside with two hand applied layers of VANDEX SUPER, (total coverage approx. 1.5 kg/m²).

Why Vandex ?

A crystalline waterproofing lining has been specified. Vandex' proven track record of hundreds of successfully lined potable water tanks and reservoirs convinced consultant and authorities to approve Vandex's crystalline product VANDEX SUPER as cost effective solution.

Technical Information

Product used: VANDEX SUPER

Area treated: 5'000 m²
