

FLEXTAPE ADHESIVE TW

Thixotropic epoxy resin adhesive

- two-component system
- adhesive for VANDEX FLEXTAPE and VANDEX FLEXTAPE E
- approved for drinking water
- excellent mechanical characteristics
- can be applied horizontally, vertically and also overhead

PRODUCT DESCRIPTION

VANDEX FLEXTAPE ADHESIVE TW is a solvent-free, mineral filled, two-component epoxy resin adhesive. It consists of VANDEX FLEXTAPE ADHESIVE TW RESIN and VANDEX FLEXTAPE ADHESIVE TW HARDENER.

AREAS OF APPLICATION

VANDEX FLEXTAPE ADHESIVE TW can be used as a general purpose adhesive, as well as for applying VANDEX FLEXTAPE and VANDEX FLEXTAPE E over construction and movement joints (even where movement is significant).

VANDEX FLEXTAPE ADHESIVE TW is chemically inert and stable and can be used in all kind of aqueous environments and drinking water structures.

PROPERTIES

When fully cured, VANDEX FLEXTAPE ADHESIVE TW is a rigid adhesive. Its pasty consistency ensures good workability even to uneven and overhead surfaces.

SURFACE PREPARATION

The substrate must be sound and widely even, open-pored and its surface free of voids, large cracks or ridges. At the time of application, the substrate must not exceed 4% (content by weight) moisture. Any adhesion reducing substances like bitumen, oil, grease, remains of paint or laitance must be removed by suitable means.

MIXING

Mixing ratio:

RESIN	to	HARDENER	=	
1 part (by weight)	to	1 part	=	
3 kg	to	3 kg		_

The components must be mixed individually before mixing together. VANDEX FLEXTAPE ADHESIVE TW HARDENER (earth coloured) is then added to the VANDEX FLEXTAPE ADHESIVE TW RESIN (white) and mixed carefully together with a mechanical mixer (max. 400 rev/min.).

The adhesive is ready for application when the mixture exhibits a uniform light brown colour devoid of streaks.

APPLICATION

VANDEX FLEXTAPE ADHESIVE TW is applied manually by trowel or toothed comb to both contact surfaces of the substrate to be covered with the tape (5 cm on either side of the crack or joint), pressing vigorously to ensure a good bond. Depending on roughness of the surface, layer thick-

ness of VANDEX FLEXTAPE ADHESIVE TW is approx. 1–2 mm. – When the adhesive and the tape are applied togehter, the latter must immediately be pressed into the adhesive to ensure a good bond, and then coated with a further layer of VANDEX FLEXTAPE ADHESIVE TW on top.

CONSUMPTION

Tape width 200 mm: 0.8–1.1 kg per m of tape Tape width 150 mm: 0.5–0.8 kg per m of tape

PACKAGING

Unit of 6 kg VANDEX FLEXTAPE ADHESIVE TW, consisting of FLEXTAPE ADHESIVE TW RESIN = Comp. A = 3 kg FLEXTAPE ADHESIVE TW HARDENER = Comp. B = 3 kg

STORAGE

When stored in a dry and frost-free place in unopened, undamaged original packaging, both components have a shelf life of 12 months.

CLEANING

In its cured state the VANDEX FLEXTAPE ADHESIVE TW adheres strongly to the substrate. For this reason it is important to clean all tools with a solvent before it hardens.

HEALTH AND SAFETY

Please refer to Safety Data Sheet on www.vandex.com.
